

Yahya Tarek Farag

Engineering Executive — Engineering Management • Manufacturing Operations • Facilities & Maintenance • Construction & Fit-Out

Cairo, Egypt • Y_Tarek91@yahoo.com • (+2) 01099246336 • [linkedin.com/in/yahia-tarek](https://www.linkedin.com/in/yahia-tarek)

Executive Summary

Senior engineering executive with more than a decade of progressive experience leading full-scope engineering functions across food & beverage manufacturing, multi-site facilities management, and large-scale construction programmes. Currently serving as General Manager of Engineering at one of Egypt's fastest-growing multi-brand F&B groups — reporting directly to the Owner & Chairman — with single-point accountability spanning multiple manufacturing plants, an extensive nationwide network of retail outlets and facilities, and one of the largest multidisciplinary engineering workforces in the sector.

Reduced the group's engineering operating budget by **a third** — a sustained, recurring saving — by designing and deploying a custom maintenance management system (CMMS) from scratch and transforming operations from reactive to planned-preventive across the entire estate. Delivered multiple greenfield manufacturing plants from bare shell to full production, restructured an existing temperature-critical dairy operation, and led a construction division that has opened dozens of new branches across several brands. Combines deep technical engineering expertise (automation, power, MEP, cold chain) with proven executive capability in budget control, organisational building, and ownership-level reporting.

Impact Highlights

↓ **33%**

Sustained reduction in the group's monthly engineering & maintenance budget —

**Full Digital
Transformation**

achieved within the first year and maintained month-on-month.

Designed and deployed a custom CMMS from zero — achieving complete coverage of every site in the national portfolio, with no prior digital infrastructure.

2 Greenfield Plants

Delivered two manufacturing plants from bare structure to full production readiness, and restructured a third temperature-critical facility.

Multi-Brand Expansion

Led the construction division delivering dozens of new branch openings across several F&B brands — full lifecycle from brief to handover.

Nationwide Coverage

Built the maintenance coverage model, SLA framework, and escalation protocols serving an extensive multi-governorate portfolio of outlets, warehouses, and facilities.

Organisation Builder

Recruited, structured, and lead a large multidisciplinary engineering workforce spanning maintenance and construction divisions.

Core Competencies

Engineering & Technical Leadership	Manufacturing & Plant Operations
Multi-Site Facilities Management	Maintenance Strategy (Preventive / Predictive)
CMMS Design & Implementation	Greenfield Construction & Commissioning
Branch Rollout & Retail Fit-Out	OPEX / CAPEX Budget Control
Cost Reduction & Process Redesign	Contractor & Vendor Management
PLC / SCADA / Industrial Automation	Power Distribution & MEP Systems
Cold Chain & Refrigeration	Large Team Leadership & Development
LEAN Manufacturing & Six Sigma	Executive & Ownership-Level Reporting

Professional Experience

General Manager of Engineering

Jul 2023 – Present

B.Laban Engineering — Cairo, Egypt

Multi-brand F&B group operating multiple manufacturing plants and an extensive nationwide network of retail outlets, warehouses, and facilities. Direct report to the Owner & Chairman.

Cost Transformation & Digital Systems

- ▶ Reduced the group's monthly engineering and maintenance budget by **a third** — a sustained recurring saving — through process redesign, vendor consolidation, and full digitalisation of maintenance operations.
- ▶ Conceived, designed, and deployed a **custom CMMS entirely from scratch**, with no existing digital infrastructure — now covering every location in the national portfolio and managing work orders, asset registers, technician scheduling, spare-parts consumption, and fault history in a single platform.
- ▶ Shifted the entire maintenance model from reactive to planned-preventive — significantly reducing fault response times, eliminating duplicated call-outs, and giving ownership real-time visibility across the estate for the first time.

Manufacturing & Plant Engineering

- ▶ Delivered **two manufacturing plants as greenfield projects** — from bare structure through engineering fit-out, equipment procurement and installation, utility commissioning, and full production readiness. Both plants are now operational.
- ▶ Led the restructuring and technical modernisation of a **temperature-critical dairy plant** — upgrading infrastructure, optimising production line configurations, and safeguarding cold-chain integrity from production through distribution to retail.
- ▶ Introduced new production equipment across all plants, achieving documented gains in throughput and a measurable reduction in material waste — directly improving yield and cost of production.
- ▶ Established preventive and predictive maintenance regimes for all plant and refrigeration assets, aligned with production schedules to eliminate unplanned stoppages.

Nationwide Facilities & Maintenance Operations

- ▶ Built and lead a large multidisciplinary maintenance organisation — electrical, mechanical, civil, and HVAC — delivering scheduled maintenance, rapid reactive response, and technical supervision across a geographically dispersed multi-governorate portfolio.
- ▶ Developed the national coverage model, team deployment structure, escalation protocols, and SLA framework — transitioning the function from ad-hoc activity to fully managed operations.
- ▶ Report directly to the owner on engineering performance, maintenance cost, project status, and capital spend — in an executive format suited to ownership-level decision-making.

Construction & Multi-Brand Expansion

- ▶ Lead a dedicated construction and fit-out division that has delivered **dozens of new branches** across several F&B brands — accountable for the complete lifecycle of every project: brief, design review, contractor selection, site supervision, and formal handover.
- ▶ Standardised technical specifications and construction workflows across all brands — cutting per-project delivery time and enabling a high volume of concurrent projects without quality compromise.
- ▶ Negotiate all MEP and civil execution contracts directly — consistently securing competitive pricing while enforcing specification and programme compliance — and manage permitting and municipal approvals across multiple governorates.

Electrical Department Manager

Jan 2018 – Apr 2023

El Abd Foods — Cairo, Egypt

Large-scale F&B manufacturer and multi-site retail operator. Full ownership of the electrical function across the central factory and a growing nationwide branch network. Owner's sole technical

representative on all construction projects.

- ▶ Designed, built, and commissioned all **PLC/HMI/SCADA control systems** for the sweets manufacturing lines — enabling full automation of previously manual production and establishing the control architecture still in use today.
 - ▶ Managed all factory power distribution infrastructure — MCCs, switchgear, transformers, and SCR drives — diagnosing and resolving complex faults to maintain round-the-clock production continuity across rotating shifts.
 - ▶ Acted as the **owner's sole representative on every new branch project** — reviewing consultant designs, correcting shop drawings, negotiating execution contracts, supervising on-site implementation, and formally signing off on completion.
 - ▶ Procured, rebuilt, and installed production equipment and process lines — delivering capacity expansion at a fraction of the cost of equivalent new-equipment procurement.
 - ▶ Managed the department's full operating budget — manpower, spare parts, contractors, and capital expenditure — with structured approval and reporting discipline.
 - ▶ Led the complete recruitment cycle for all department positions and produced technical training documentation for all major equipment — measurably reducing reliance on external technical support.
-

Maintenance Engineer

Oct 2015 – Dec 2017

El Abd Foods — Cairo, Egypt

- ▶ Implemented the factory-wide equipment maintenance plan, ensuring all machinery operated within safety parameters and production targets were consistently met.
 - ▶ Authored operation and maintenance manuals for production equipment — creating the documentation baseline that subsequent technical staff built on.
 - ▶ Commissioned new machinery and trained the operating workforce, reducing third-party technical call-outs and shortening equipment integration timelines.
-

Electrical Maintenance Engineer

Sep 2014 – Oct 2015

Faragello Juices Factory — Alexandria, Egypt

- ▶ Managed on-site electrical installation activities across a high-volume juice production facility, ensuring schedule adherence and full specification compliance.
 - ▶ Developed electrical specifications for new system installations, raising the technical documentation standard within the maintenance function.
-

Electrical Technical Office Engineer

Sep 2013 – Jul 2014

Falcon Power Systems — Alexandria, Egypt

- Designed and reviewed electrical system drawings for construction projects, ensuring compliance with applicable standards and codes from design through site execution.
- Prepared cost estimates and monitored expenditure against budget; coordinated with project managers to keep the electrical scope on time and within agreed cost.
- Maintained technical documentation including single-line diagrams, schematics, and specification packages.

Technical Skills & Tools

Maintenance & FM Systems

Custom CMMS (designed & deployed) • Preventive & Predictive Maintenance • SLA & Work Order Management • Asset Lifecycle Management

Automation & Control

Siemens TIA Portal • SIMATIC STEP 7 • WinCC • PLC/HMI/SCADA • VFD • SCR Controllers • Arduino

Power Infrastructure

MCC • Switchgear • Transformers • Panel Boards • Power Distribution • Light Current & Data Systems

Refrigeration & Building Services

Cold Chain & Cold Rooms • HVAC Systems • MEP Design Review • Fire & Safety Compliance

Design & Project Tools

AutoCAD • ETAP • Dialux • Fusion 360 • MS Project • MS Office (Advanced)

Operational Excellence

LEAN Manufacturing • Six Sigma • 5S • OEE Improvement • Root Cause Analysis

Education

BSc Electrical Engineering — Power & Control Department

Alexandria University, Faculty of Engineering — 2013

Graduated with Very Good Honours. Graduation project: Building-Integrated Photovoltaic Systems (BIPV) — awarded Excellent distinction.

Certifications & Professional Development
